

# ID Card Maker Software

*The Key to Achieving a High Quality, Efficient Digital Photo ID Process is in the Software*

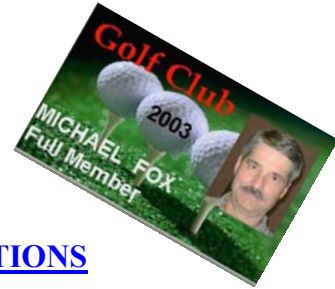

**Polaroid Commercial ID Systems ID Card Maker software** is one of the most stable, functional and powerful identification card applications in the industry. ID Card Maker is a key system component for designing custom photo ID cards and management of information in a secure environment. ID Card Maker is available in three versions, with functionality that ranges from basic to highly advanced. ID Card Maker was designed to streamline your photo identification process and includes key application areas such as efficient User Interface Design, Badge Design, Photo/Image Management, Networking, and Database Connectivity and Management.

**ID Card Maker Level I** software provides basic photo ID Card design and production functionality when integrated with a Polaroid ID Card Printer and Polaroid Digital camera, and offers a seamless, turnkey solution. Level I is a standalone configuration (no networking or shared database capability) with an easy to use operator interface, seamless, automatic installation of key components, a powerful, user definable database, multiple ID badge templates, photo and signature capture capability, and multi-level security features.

**ID Card Maker Level II** software provides all the same functionality as ID Card Maker I. In addition, Level II includes networking capabilities, which allows for the sharing of databases and card printers across multiple workstations, Local Area Networks using ACCESS databases, and/or connecting to custom ACCESS databases. Other Level II features include multiple image and signature file capture, multiple fingerprint capture, the ability to create, import and edit roster lists, verification station capability at designated work areas (view and edit only - with appropriate key), and print and database update batch functionality.

**ID Card Maker Level III** software is our most functionally advanced offering. In addition to all Level I and II functionality, Level III enables connection with ODBC databases, database field view and edit protection, selection of groups of records for export, and allows for advanced creation of text and data strings with expressions.

## ID CARD MAKER OPERATING SPECIFICATIONS

- **Operating System:** Windows 98, 2000, XP and NT 4.0 (NT 4.0 does not support USB)
- **CPU Minimum:** Pentium level CPU at 400 MHz or higher (higher for Windows 2000 & Windows XP)
- **RAM:** Minimum of 128 megabytes of RAM; optimum results with 256 megabytes or more
- **Hard Disk Space:** Minimum of up to 90 megabytes of free hard disk space depending on which installation option you choose:
  - **ID Card Maker:** Minimum of 45 megabytes of disk space (individual images require more (a single portrait is 10-12K).
  - **ID Card Maker** uses a “runtime” version of Microsoft Access 2000 for its database Engine. If you require the installation of the “runtime” version of Access, this installation requires an additional 43 megabytes.
  - **User Manual Installation** requires 2 megabytes of disk space
- **CD ROM Drive:** Required
- **Warranty:** 90 day limited warranty
